

Package Unit Simply Everything

“Package unit” is our magic word for completely tested and turnkey process units in modular design. Westfalia Separator Engineering paves a simple and planable way to maximum quality for you.

As a completely care-free package, the package unit provides you with combined advantages – because it is designed, produced and tested by specialists under optimum conditions, and integrated in your process with minimum effort.

At the beginning of every project, we closely work together with you and define your process engineering requirement, and transfer this to our modular design. We then assume responsibility for complete project planning of installation construction and automation. We offer you personal holistic support right through to commissioning and individual after-sales service.

We not only reduce your workload; we also create the necessary conditions for the reliably high quality of our services. You can rely on this: We ensure optimum, agreed and comprehensive planning and implementation of your installation.

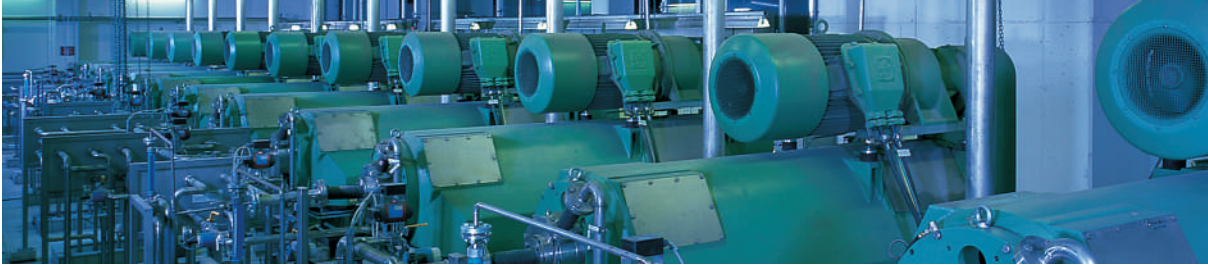

Minimum effort, optimum function

As a result of the optimum integration of the module in your process, installation times on the customer's premises are reduced – and production downtimes are also minimised. Upon request, we also

prepare comprehensive test documentation which can be verified in our internal test bay.

Your added value:

- Efficient completely care-free package
- Low planning input for you
- Maximum and comprehensive quality
- Varied flexibility
- Technology agreed in an optimum manner
- Production under optimum conditions
- Checked, tested and turnkey installation
- Rapid and trouble-free commissioning
- Minimum overall costs

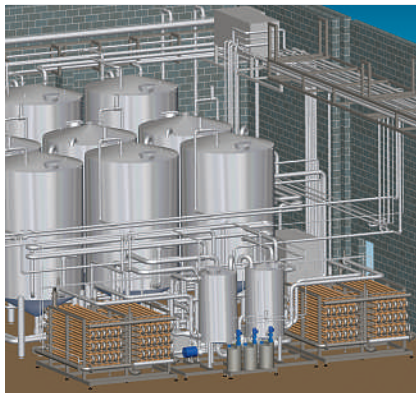

Installations Complexity Made Easy

It is frequently not easy to retain an overall perspective when comprehensive and complex projects are implemented. Westfalia Separator Engineering offers you the know-how and experience necessary for solving such demanding tasks.

Are you planning a major investment anywhere in the world? Do you wish to update or extend your process line? Westfalia Separator Engineering is definitively the reliable partner at your side.

We assume responsibility for the complete engineering for your installation. This also includes preparing all necessary planning documents which you require for building planning, such as foundation plans, installation plans and pipework plans. Our project engineers also assume responsibility for selecting and designing the equipment, fittings and measuring devices.

And of course, we also plan and construct the control facility necessary for your installation – with precisely that degree of automation which you wish to receive. Our experienced personnel ensures rapid and uncomplicated installation and commissioning on your premises.

Our speciality: Modularity

Even in the case of major projects, the trend is now going in the direction of modular or package design. We break down even complex installations into meaningful and functional sub-systems which can easily be installed, because this solution offers a variety of benefits – and provides you

with genuine added value.

Your added value:

- Time and cost savings
- Comprehensive engineering
- Minimum planning input for you
- Rapid installation times (“time-to-market”)
- Plant construction & automation from a single source
- Completely care-free package with package design
